

Unlock automatic path execution with Gantry Systems & Path Following

Pair a custom path following machine with our intuitive software to simplify complex paths for milling, drilling, dispensing, laser engraving, and more.

Our Path Following solution comes as a comprehensive application kit, including MachineApp software for controls, 3-axis gantry robot, motor configuration, and optional gripper suggestions. The machine is entirely modular, suitable for multiple use-cases and actuator types.

Code-free software
with MachineApp

G-code compatibility

Multiple supported use-cases

Digital twin to simulate

Design your custom machine in hours

Access our library of modular components and our 3D CAD software to create a machine customized to your specific needs.

- Choose from six compatible linear actuator types
- Add safety devices: light curtains, area scanners, and e-stop buttons
- Access multiple pre-designed gantry robots in our Design Library

With a ready-to-use HMI and an intuitive GUI, create your unique path. No programming expertise required.

- Use your desired CAM software and upload the path to your MachineMotion
- View a digital twin of your machine and simulate your path before deployment
- Perform a dry run at lower speeds and z-offset to eliminate risk

Simplify complex paths with the combined power of custom machines and intuitive software.

One cloud platform to design, automate, order and
deploy automated equipment
