Improved Insight

1,200+ customer-requested
events reported

Challenge:

A leading company in the sustainable energy sector needed to maintain robust security across its high-tech facilities while ensuring operational efficiency. Traditional security methods were proving inadequate, leading to potential vulnerabilities and resource inefficiencies.

Solution:

To address these concerns, Cobalt introduced its Global Security Operations Center as a Service (GSOCaaS) solution, which includes:

- **Video Monitoring:** Utilizing Cobalt Monitoring Intelligence, Cobalt GSOCaaS provides real-time surveillance and threat detection.
- **SOC Automation:** Automating routine tasks and workflows to allow security personnel to focus on critical incidents.
- **Robotic Security Presence:** Deploying intelligent robots for patrols, monitoring restricted areas, and deterring potential intruders.
- **System Integrations:** Seamless integration with access control systems like Openpath for real-time monitoring and detailed access logs harmonizing disparate systems.

Results:

In a typical three month period, Cobalt Monitoring Intelligence reviewed over 150,000 events, reporting 1,200 customer-requested events, with just 39 critical events escalated for immediate action. The significant reduction in nuisance alarms and system's real-time insights and reporting capabilities have enabled proactive security measures and resource allocation, further optimizing operational efficiency.

Benefits:

- **Enhanced Threat Detection:** Improved capabilities in identifying and responding to potential security breaches.
- **Operational Efficiency:** Streamlined security workflows through automation.
- **Increased Security Presence:** Intelligent robots provide additional physical security.
- **Seamless Integration:** Real-time control over facility access with systems like Openpath.

By implementing Cobalt GSOCaaS, that runs on Cobalt Monitoring Intelligence and integrates with a broad range of edge devices, the energy company has significantly enhanced its security posture, supporting its commitment to innovation and sustainability in the energy sector.

This pioneering company in the sustainable energy sector develops innovative solutions to revolutionize energy production and consumption. With cutting-edge facilities and a strong environmental focus, it leads the energy transformation movement. The company emphasizes advanced security measures to safeguard its assets and maintain the seamless operation of its ground-breaking technologies.
