

Cobalt Omni Security Operations Center (SOC) Automation

AI-Powered, Human Verified

Cobalt's Omni software offers an innovative solution for Security Operations Center (SOC) monitoring. It is designed to automate and improve the effectiveness of customers' existing video surveillance and access control systems. Omni seamlessly integrates into legacy systems, allowing users to enhance their current security program by identifying threats and alarms without needing a complete system overhaul.

Streamlined Security Monitoring

Omni consolidates data and alerts into a single interface. This centralization simplifies the monitoring process by reducing the reliance on multiple screens. It enables real-time assessment and response to security incidents such as:

- Tailgating
- Gun Detection
- Badge Verification
- Identification of people & vehicles

Accurate Threat Identification and Strategic Insights

With Omni, expect over 95% accuracy in threat detection and a significant reduction in false alarms. Omni also identifies malfunctioning devices and offers insights into the origins of alerts, thus enhancing your security strategy.

Detect More. Respond faster. Spend Less.

- Enhanced AI-driven Event Detection and Analysis
- Efficient Automated Security Response Workflow
- Cost-Effective, Compatible Solution with Legacy Systems

Human-Centric Security with 24/7 Expert Oversight

Cobalt Omni blends AI monitoring with human expertise. The Cobalt Command Center provides 24/7 oversight, ensuring rapid, live notification. Cobalt Security Specialists can dispatch security robots or human guards when necessary, leading to more effective threat management and improved security protocols.

Seamless Integration Across Security Management Solutions

Omni is compatible with a broad range of security management solutions, including ticketing systems, door/elevator access, and facilities management. It can create tickets and directly feed information into each system, ensuring seamless information transfer and ticket generation across different platforms.

Transformative Impact for Executive-Level Security Management

Omni delivers detailed reports and dashboards that turn complex data into actionable insights, highlighting areas for improvement and potential cost savings. This feature allows security professionals to effectively demonstrate and communicate the ROI of physical security strategies to executive leadership.
