

ArcMove

AI That Moves With Purpose

ArcMove brings physical AI to life. Built on a mobile base with intelligent navigation and a screen-based avatar, it does not wait for users to approach — it goes to them. Designed for indoor environments like hotels, exhibition centres and entertainment venues, it adds motion to intelligence.

Help finds the guest

Detects arrivals and approaches them, instead of waiting to be found.

Leads, not just tells

Physically escorts visitors through complex spaces rather than pointing and hoping.

Deployable where it is needed

Patrols, guides or waits in high-traffic areas on a schedule you set.

USE CASES

Guest Greeting & Welcoming

Placed at entrances or lobbies, ArcMove detects incoming guests and proactively approaches with a friendly greeting, offering assistance immediately — from check-in guidance to common questions — reducing front-desk load and making every arrival feel personal and tech-forward.

Guided Navigation & Escorting

ArcMove physically leads guests through complex spaces: a hotel guest to the spa, an event attendee to the right hall, a visitor to the family facilities in a mall. It removes confusion and improves flow, especially in large or crowded environments.

On-Demand Information Anywhere

With conversational AI and mobility combined, ArcMove goes where it is needed rather than staying where it is placed. From exhibition centres and theme parks to hospitals, it roams defined areas, stops to offer help, highlights promotions, or acts as a roaming help desk.

RETURN ON INVESTMENT

ArcMove turns service into a dynamic interaction rather than a static point.

Proactive assistance

Guests do not need to search for help — help finds them, improving satisfaction and reducing confusion.

Labour optimisation

Offloads basic guidance, escorting and enquiry work, reducing manpower needs or freeing staff for higher-impact roles.

Brand differentiation

A mobile AI robot interacting naturally with guests is memorable, and sets your brand apart.

Flexible deployment

Scheduled to patrol, guide or idle in high-traffic areas by need and time of day.

ArcMove is more than an assistant — it is an intelligent presence that turns space into service, and movement into value.

See it in your space

We will show you the closest deployment we already run.
