

Horizon CMS - AI Platform for WindTurbine Condition Monitoring Teams

Horizon CMS is the first AI platform for advanced condition monitoring of wind turbines.

Streamline your CMS and SCADA data streams into one platform and apply advanced diagnostic scripting and AI across your entire fleet of drivetrains and beyond. Achieve earlier and more accurate fault detection and spend less time on manual data analysis and false alarm handling.

Horizon CMS is built for teams of condition monitoring engineers who want to exploit modern data science and machine learning technologies, to reach new heights in diagnostic performance.

Horizon CMS has been engineered from the ground-up to handle the data volumes and complexities involved in operating a condition monitoring setup for 10.000s of wind turbines.

Earlier and more accurate fault detections has significant impact on your O&M business.

- Fewer unnecessary inspections
- Less extensive repairs
- Efficient O&M scheduling
- Shorter downtime

4

reasons why your condition monitoring team will love Horizon CMS

Sensor streams - Unified!

Horizon CMS unifies vibration, SCADA and other* data streams into one single diagnostics platform, that enables your team to work better together.

Scripting with Python

Experiment with all your data to develop and deploy advanced diagnostics scripts. Horizon CMS unlocks your sensor data and diagnostic skills like never before.

Diagnostic AI

Deploy our AI algorithms to exceed past diagnostic performance. Drivetrain AI library included in the base subscription.

Modern software delivery

Horizon CMS is a SaaS product, which means that new updates and bug fixes are not held hostage by annual license fees; They are simply delivered continuously.

Key Metrics

10X

Monitoring Efficiency

Earlier & More Accurate

Fault Detection

90%

False Alarm Detection

Pay-as-you-go with SaaS € / MW annual pricing, paid monthly

AI library for drivetrains included

Unlimited number of users

Support* & continuous feature updates included

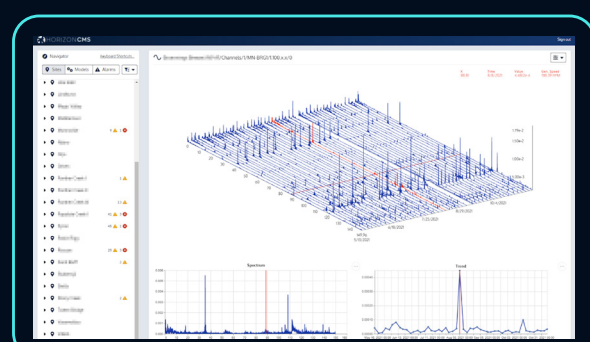

API integrations to 3rd party & internal systems included*
