

## SEASAM

## EXPLOCAM ADD-ON

### IN-DEPTH INSPECTIONS MADE EASY

- The ExploCam is the first ROV accessory of its kind. This helpful secondary camera, made for Seasam Underwater Drone, is fitted on a protruding mount. By precisely piloting your ROV thanks to Seasam Control App™, the ExploCam can easily be inserted into tiny interstices such as vents, sea chests grates, cracks, etc.
- ExploCam extends further the possibilities of Seasam ROV by enabling the survey of these otherwise hard-to-reach areas.

### SEA CHEST INSPECTIONS

Insert the ExploCam through the interstices of a sea chest grate to get a clear view of its contents. With its wide FOV, you gain a comprehensive overview of the inside without having to send someone down. The ExploCam video feed appears in a window within the screen, and can be freely switch with the main camera display at any time.

### INTEGRATED 3rd PARTY ACCESSORIES

- Multibeam sonar
- Gripper arm
- Additional / turbidity camera
- External lighting

### SPECIFICATIONS

| CAMERA MOUNT       |         | CAMERA         |                        |
